Blindspot

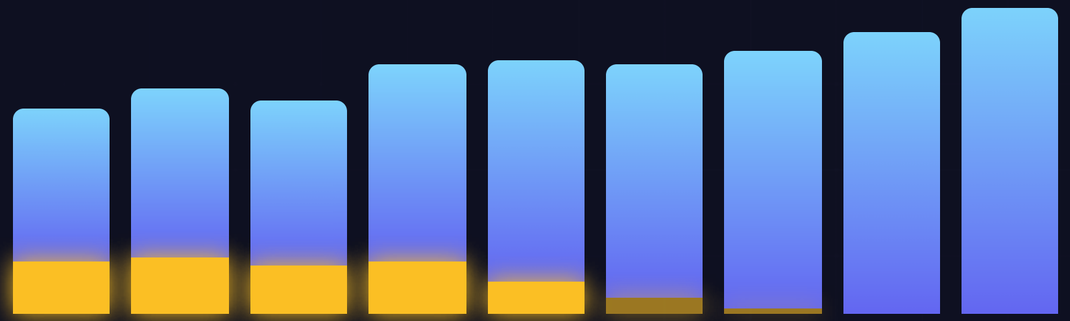

Your best customers don’t say goodbye.

BlindSpot helps independent online shops find the valuable customers who have gone quiet, check the evidence, reach out, and see who orders again.

1 · THE OVERLOOKED RELATIONSHIP

The total can rise while a regular goes quiet.

Blue: total sales. Amber: one regular customer. Nothing on the chart says they stopped.

WHY IT MATTERS

29.0% vs 7.7%

reported being unprofitable: businesses getting under a quarter of revenue from repeat customers, vs over half.

Small Business Expo survey of 1,100+ owners, 2026. An association, not proof of cause.

Not “are sales up?” but “which regulars should I contact first?”

Who went quiet?

Top customers with no order in 90 days, each with their usual rhythm.

Is it real?

One big account can be most of the money. See the history, not just a total.

What do I do?

Pick who to contact, send a short note, and later see who ordered again.

3 · WHAT THE DATA SHOWED

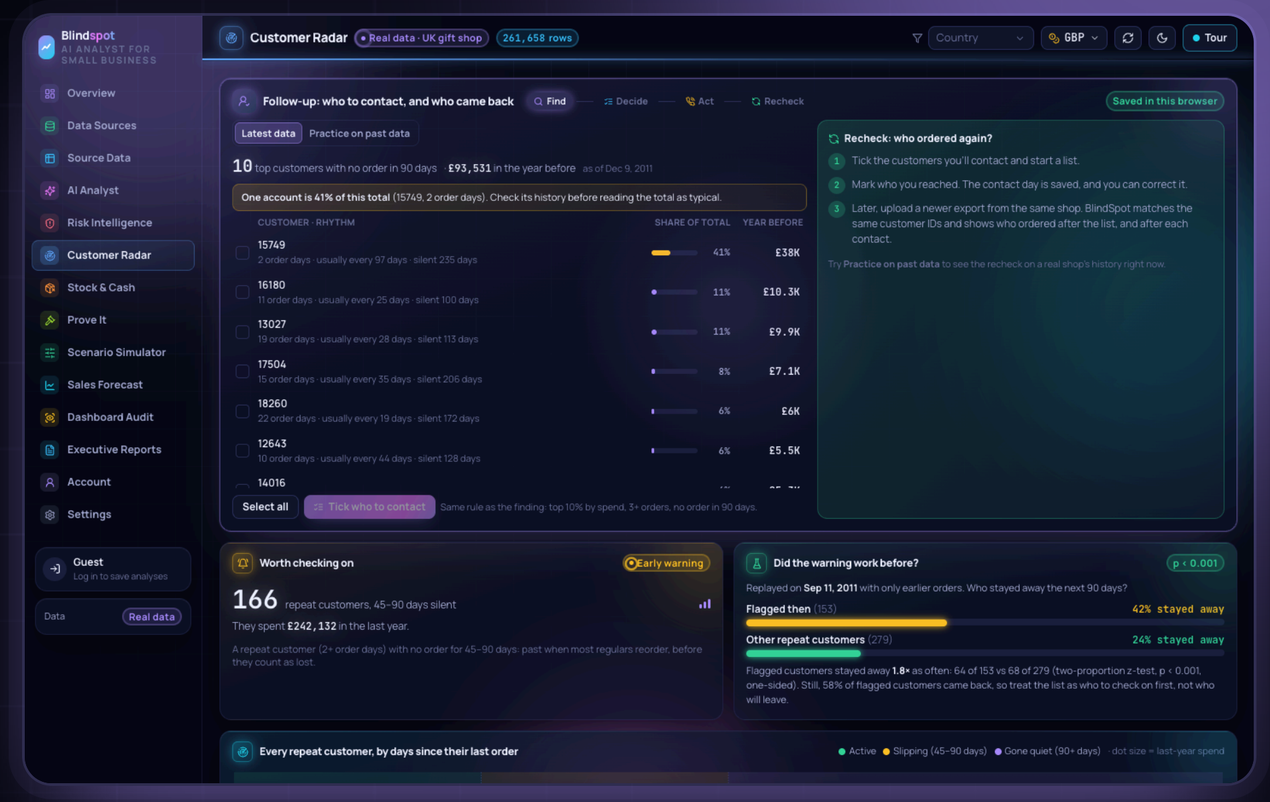

10 top accounts went quiet in a real shop's records.

£93,531.25

their spending in the year before. Every pound traces to exact rows.

One account is **41%** of that, from just 3 orders. BlindSpot shows the catch instead of hiding it.

UCI Online Retail II (public historical data, CC BY 4.0), 25% customer sample.

Checked three ways, and honest about the limits.

Exact rows

Every amount opens into the records behind it, reconciled to the penny.

```
Finding £93,531.25
Rows behind it £93,531.25 ✓
```

Independent check

A separate Python script gets the same 10 accounts, orders, gaps and total.

```
accounts 10 / 10
orders, gaps, silence match
replay counts match
```

Replayed on the shop's past

32–36% **3–8%**

flagged customers vs other top customers who placed no order in the next 180 days (Fisher $p < 0.005$, both replays). **Most flagged customers still came back**: it's a list to review first.

5 · THE LOOP

Find. Decide. Act. Recheck.

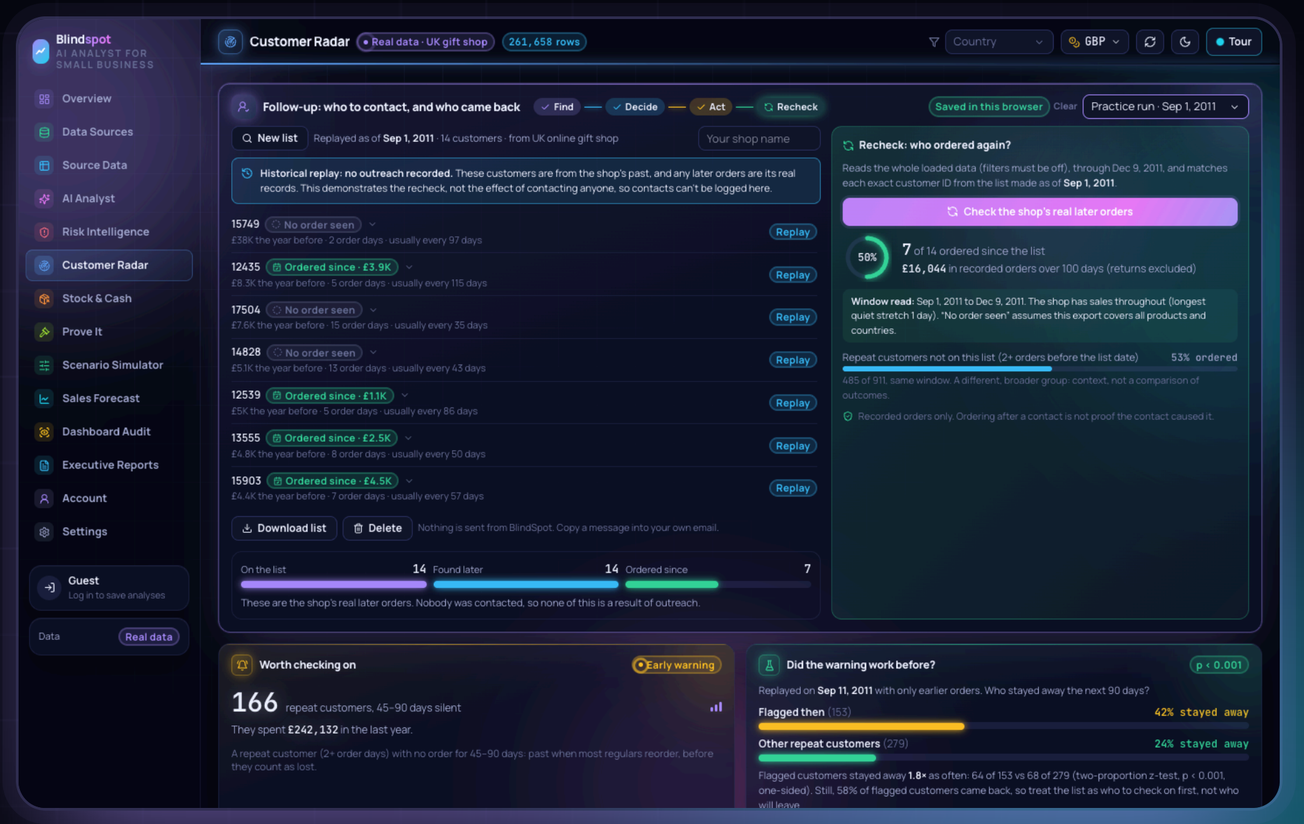

Find — Quiet top customers and their rhythm

Decide — Tick who to contact; skip with a reason

Act — Claude drafts a checked note; you send it and log the day

Recheck — A newer export: who ordered after the list, and after each contact

Historical replay, no outreach recorded: of 14 quiet customers listed as of Sep 1, 2011, **7 ordered again** within 100 days in the shop's real records.

6 · WHAT'S STILL OPEN

Next: a real owner, their own export.

Validated on one public shop's history.

Not yet confirmed by a merchant. The protocol is written: an owner marks contact or skip-with-reason, unassisted, then rechecks after 30–60 days.

Recorded, not claimed.

A later order isn't proof an email worked, and BlindSpot never says it is. No revenue is claimed as recovered.

Your best customers don't say goodbye. Now you'll notice.
